TOOLS AND TECHNOLOGY

- Frontend :-HTML 5,CSS 3,JavaScript Es 6
- Backend :-PHP 8.3
- Web server :-Apache server(via XAMPP V8.2.0)
- Database :-MYSQL 8.0.33
- Reporting tool:- Visual Studio code v1.101.2
- Other tools :-Microsoft word 2021 , Microsoft Power Point Presentation 2019, draw.io 24.7.17, Notepad++ 8.8.3.0

EXISTING SYSTEM

- The current working nature of the shop is completely offline.
- Product details, sales transactions, stock levels, and customer information are recorded manually in paper registers or basic logbooks.
- Products and services are provided strictly in-person when customers physically visit the store.
- Customer must visit the store physically for any service inquiry or order status updates.

PROPOSED SYSTEM

- We will develop a dynamic website that will allow the company to expand its target audience and deals with customers.
- Replaces paper registers with an automated database that tracks inventory in real time and updates stock levels instantly after every sale.
- Allows customers to view available services, request repairs without needing to physically visit the center every time.
- Securely stores all transaction history, customer details, and sales records in a digital database, eliminating the risk of data loss or manual calculation errors.
- Generates accurate digital receipts quickly, reducing checkout wait times for walk-in customers.

LIST OF MODULE

1. Customer management
2. Employee management
3. Product /Inventory management
4. Supplier management
5. Order management
6. Service & repair management
7. Delivery management
8. Payment management
9. Feedback management

MODULE DESCRIPTION

1) Customer Management:

- This module handles all customer-related data seamlessly.
- Admin can add, update, view, and manage customer details such as name, contact number, email address, and residential address.
- It maintains customer purchase history, active warranty details, and historical service records.

3) Employee Management:

- Employees are assigned tasks for sales, customization, delivery, or after sales service.
- Managers monitor attendance, allocate duties, and track overall staff performance and productivity.
- Handles company workforce details and structural roles within the organization.
- Register staff members (e.g., designer, carpenter, admin, delivery executives, and technicians).
- View staff availability and overall performance reports.

4) Product Management:

- Admin can manage products like add profile, update product specifications, and delete product from the list.
- The system manages mobile phones, televisions, refrigerators, air conditioners, washing machines, accessories, and other electronic products.
- Show products systematically filtered by type, material, size, colour & pricing attributes. Stock status is shown properly as (Available / Out of Stock) to customers.

5) Inventory management:

- This module manages finished electronics and mobile stock that is ready for sale.
- Customer can only order items that are marked “in stock”, while employee monitors inventory, updates available quantities, and removes out-of-stock products.
- Raw material & stock Management:
 - For new or customized components, raw material availability and specifications are thoroughly checked. Employees update material usage, monitor availability, and order supplies from vendors when stock is low, ensuring smooth production.

6) Supplier & vender management:

- Maintain supplier and vender details such as company name ,contact
- information,address and GST number.
- Record supplier-wise product purchase,quantities,prices,payment system.

7) Sale & Purchase Management:

- Customer purchases are recorded as sales, while supplier transactions for raw materials or electronics items are recorded as purchases.
- Employees manage both sales and purchase records to maintain perfectly clear financial tracking.

8) Order Management:

- Customers confirm their orders, and the system tracks them continuously until full delivery.
- Employees process, package, and schedule deliveries, updating the order status regularly.

9) Service, Repair & Warranty Management:

- Customers can register complaints and request services regarding products purchased from the shop.
- The system records comprehensive service requests, product details, issue descriptions, and warranty information.
- Employees assign specialized technicians, monitor repair progress, and update service status efficiently.
- The system maintains a complete lifetime history of service records, warranty claims, and replacement requests.

10) Authorized Brand Management:

- This module manages structured information about associated brands such as LG, Samsung, Sony, Panasonic, Whirlpool, Daikin, Voltas, Vivo, Oppo, iPhone, OnePlus, and others.
- If customers face issues with products under warranty, they can contact the shop directly to verify eligibility.
- The shop verifies warranty terms and safely forwards service requests to the respective company's authorized service center when required.
- The module explicitly maintains company-wise warranty policies and synchronized service records.

11) Delivery Management:

- This Module helps the customer to check the current operational offer and tracking status provided by the admin.
- The system provides an estimated delivery date and updates the customer with real-time tracking status. Customer can request delivery rescheduling or technical installation services if needed

12) Payment & Billing Management:

- The Billing & Payment module handles the automated generation of bills and digital collection of payments.
- It provides various flexible methods of payment to customers like cash, card, UPI, or secure online payment gateways.
- This Module ensures accurate billing, keeps an immutable payment record & simplifies the overall auditing process.
- This module simplifies the granular tracking of paid & pending payments for the admin dashboard.

13) Feedback & Review Management:

- Allows customers to rate the quality of service and products they received.
- Submit reviews and detailed feedback after electronics delivery or technical installation completion to enhance operational efficiency
